The Compliance Report of GC Resolutions dated 21.01.2025 was reviewed in the meeting. The Chairman and Members of Governing Council have expressed their satisfaction for the same.

3 Discussed about Incubation Building on BEMCIEL land

Preamble: Following details were submitted by Dean Infra. & Planning:

- A.** Post the visit of our team to T-HUB Hyderabad, the option of considering Steel structure over the conventional RCC structure(Pre-Engineered Building PEB) was under discussion.
- B.** We had a discussion with an external expert Mr. Akshay Divate, Structural Designer, Belagavi. He mailed us his input regarding comparison between the both.
- i. If the floor-to-floor height of structure is upto 15 feet both RCCs and PEBs cost will remain the same. But once the clear height exceeds 15 feet the PEBs will be cost effective.
 - ii. In PEBs, the carpet area will have the lesser mobility in the column lines due to offset between the column and brick wall.
 - iii. RCCs are highly fire resistant without losing their structural traits, whereas PEBs are less fire resistant.
 - iv. For shock resistance PEBs need to take more precautions for electrical work. Because metal is a good conductor of electricity.
 - v. Can't provide sunk to the toilet and concealed wiring to PEBs. Whereas the same can be provided to RCCs.
 - vi. Wastages and difficulty will be more in PEBs while defining different shapes like arch etc.
 - vii. Up to G+2 floors, erection cost is bearable in PEBs. But, when it exceeds the G+2 floor, the erection cost will be more.
 - viii. Construction time of PEBs can be faster, whereas RCCs are more time consuming. RCCs require shuttering specifically to support slab-beam and slab where as in PEBs there is no such requirement of shuttering.
 - ix. PEBs have a high scrap value. There's zero scrap value for RCCs.
 - x. More precision both in terms of fabrication and structural detailing is required in case of PEBs. If precision is not maintained, then erection of structural components will be time consuming as a result it will lead to increased cost.
 - xi. PEBs are strongly earthquake resistant structures but are weak in sustaining strong winds, as the self-weight of structure itself is less. Since concrete is brittle, its earthquake resistance is quite low compared to PEBs. But RCCs are good in sustaining strong winds as self-weight of structure is more.
 - xii. Maintaining a PEB structure requires more efforts and timely structural audits are necessary to ensure that there is no corrosion caused to any of the structural components.
- C.** Structural Consultancy fees proposed by Mr. Akshay Divate for Steel Structure shall be as follows:
1. For Designing and typical section details = ₹6,00,000/-.
 2. For Designing, Fabrication drawing and Erection drawing details along with Estimation = ₹7,50,000/-.

Discussion & Decision:

GC noted the details placed in the meeting.

Er. Akshay Divate attended the meeting and explained the concept.

After detailed discussion of pros and cons of steel structure and in view of the fact that RCC plan is already approved by Belgaum city corporation, it was resolved to go for RCC structure on the BEMCIEL plot.

Dean (I &P) and the Architect are directed to take further necessary steps.

Matter is referred to KLS BOM for its information.
